

Wednesday Challenge Form

Group Members: Alex, Andrew, Max, and David

Problem Statement: Try to cut a block down to two inches precisely and try to make the entire block's edges precise as well.

Approach: To perform this challenge properly, we needed to do careful measurements and repeat the process three times. Our second time was our most precise time. We actually got an exact (dead-on) measurement on one of the corners. Our third time was not as good, but it was much better compared to our first try.

Solution: There was no winners, but my group's brick was one of the best ones in the class.

Lessons Learned: We need to perform even more careful measurements and be more precise in cutting.
