

Date: 3/3/17

Wednesday Challenge Form

Group Members: Half of the class

Problem Statement: The class will be split into two even groups. Each person in each group will receive a plastic tube, and they will, while their left hand is behind their back, toss the tube with their right hand in the air to the person on their left while trying to catch the tube being thrown to them with their right hand. This will be done first sitting down, then standing up, then standing up and throwing the tube to the person standing after the other person standing next to you on your left.

Approach: There was not much we could do for this Wednesday Challenge except following the rules as best as we could. We decided that someone should represent the leader and count to three so that everybody could throw in unison.

Solution: We won because we worked rapidly and worked in unison very efficiently.

Lessons Learned: Working in unison and using focus helped us win.
