## Wednesday Challenge Form

Group Members: Justin and Andrew

**Problem Statement:** Design a boat that fits the car race rules for the size that will flow down the artificial river. This design will be given to another group to construct manually, and the winning teams will be the one with the real boat that flowed down the "river" the fastest, and the one that made its design.

### Approach:

**Solution:** Paul and Zach won, and, therefore, Aren's group because they got the furthest in the fastest time, and Aren designed the boat.

**Lessons Learned:** We should not have rushed in our construction of the boat.
